SUMMARY

Full-stack engineer with a backend focus. I work at Periscale AI on a commerce platform used by online sellers, where I build Django REST APIs, React/TypeScript screens and parts of the LangGraph AI agent. Co-first author of a machine learning and explainable AI paper accepted in IET Systems Biology. Most comfortable with Node.js, TypeScript, Python and PostgreSQL.

EDUCATION

B.Sc. in Computer Science and Engineering 2019 – 2025
Jagannath University, Dhaka CGPA: 3.53

SKILLS

Languages: TypeScript, JavaScript, Python, C++, Ruby
Backend: Node.js, Express.js, NestJS, Django REST Framework, FastAPI, Hono, REST APIs, Webhooks
Frontend: React, Next.js, TanStack Query, HTML5, CSS3, Tailwind CSS, Bootstrap, Shadcn UI, Material UI
Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma, TypeORM, Mongoose
AI / ML: LangGraph, Google Gemini API, RAG, pgvector, machine learning, explainable AI
Security: JWT, RBAC, multi-tenant data isolation, Zod validation, Helmet, rate limiting
Testing & Tools: pytest, Django TestCase, Git, GitHub, Docker, Docker Compose, Swagger/OpenAPI, Postman, Vercel, Render

EXPERIENCE

Junior Full-Stack Engineer 06/2026 – Present
Periscale AI (joined as Intern, promoted Oct 2026) Remote

- Build features across the Django REST backend, React/TypeScript dashboard and FastAPI + LangGraph agent service, and cover backend and agent changes with pytest and Django tests.
- Added order taking, product photo and voice note understanding, and returning-customer memory to the AI sales agent that replies to customers on Messenger, Instagram and web chat in English, Bangla and Banglish.
- Built the human handoff flow so the agent passes a conversation to a staff member when it should, and the staff reply still reaches the customer after they leave the chat.
- Fixed dropped and stuck AI replies in production with caching, timeouts and retries around LLM calls, and made message polling idempotent so no message is skipped or answered twice.
- Built multi-role RBAC on a 76-permission catalog, enforced in the Django API, the agent service and the React route guards.
- Integrated three courier APIs (Carrybee, Pathao, Steadfast) with signed webhooks and cascading location search.
- Split the core Orders & Finance page into role-specific Call Center, Processing and Shipment boards.
- Shipped discounts, location-based delivery charges, invoices, follow-ups and inbox analytics, DB to UI.

PUBLICATION

Identifying Influential Biomarkers of Colorectal Cancer Using Bioinformatics and Machine Learning Approaches with Explainable AI Accepted 10/2026

PROJECTS

ShopSphere, Multivendor E-Commerce Platform | GitHub | Live | API Docs
Tech: TypeScript, Node.js, Express, MongoDB, JWT, Puppeteer

- Admin, seller and buyer roles with cart, wishlist, orders, coupons, refunds, reviews and Stripe/PayPal/COD payments.
- Competitor price scraper (Puppeteer, with a Cheerio fallback) that suggests prices to sellers.

Multi-Tenant Organization Workspace API | GitHub | Live | API Docs
Tech: TypeScript, Node.js, Express, PostgreSQL, Prisma, Zod

- Every query is scoped to an organization, so tenants can never see each other's projects, tasks or users.
- Three roles (Platform Admin, Org Admin, Member), Swagger docs and a Postman collection.

ExpenseBot, AI Telegram Expense Tracker | GitHub (Backend) | GitHub (Frontend) | Live Bot | Dashboard
Tech: TypeScript, Node.js, Express, PostgreSQL, Prisma, React

- Gemini turns "500 uber yesterday" into amount, category and date; common phrases skip the API via keywords.
- Sends a Telegram alert when monthly spending passes the user's budget; React dashboard for charts and edits.

ShopBot, AI E-Commerce Chatbot | GitHub | Live
Tech: Next.js 15, TypeScript, MongoDB, Mongoose, Gemini, Zod

- Shop through chat (10 intents): Gemini only extracts the intent, Zod validates it and the service layer acts, so the AI never touches data directly.
- Falls back cleanly when Gemini is overloaded or returns bad JSON; JWT auth with customer and admin roles.
